SENIOR PRODUCT MANAGER | TECHNICAL PRODUCT LEADER | AI/PLATFORM/ENTERPRISE SYSTEMS

Senior Technical Product Manager with 5+ years of product management experience and 9+ years leading quality, analytics, and digital transformation initiatives across enterprise, fintech, and AI-driven platforms. Proven track record owning product requirements, roadmap execution, and cross-functional delivery for high-scale mobile, backend, and cloud systems serving up to 500,000+ daily users. Combines deep technical fluency in APIs, cloud infrastructure, and AI/ML systems with strong product judgment, stakeholder alignment, and measurable business outcomes, including 32x faster workflows, 99% model accuracy, and 20% improvement in delivery predictability. Holds a B.S. in Software Engineering and M.S. in AI & Machine Learning. Known for owning product decisions end-to-end, from initial concept through post-launch iteration and system evolution.

CORE COMPETENCIES

- Product Strategy & Roadmap Execution
- Senior Technical Product Management
- AI / ML Product Development
- Platform & API Product Design
- Requirements Definition & User Stories
- Cross-Functional Leadership
- Agile / Scrum Delivery
- Stakeholder Management
- Data-Driven Prioritization
- Release Governance
- Product Metrics & Observability
- Enterprise & Fintech Product Delivery

TECHNICAL FLUENCY

AI/ML Systems: LLM orchestration, RAG pipelines, multi-agent systems, prompt engineering, context engineering, LLM evaluation, vector search, document parsing, OCR integration, AI workflow automation

Platforms / APIs: REST APIs, Swagger/OpenAPI, Postman, microservices architecture, event-driven systems

Cloud / Infrastructure: AWS (Lambda, S3, RDS/Aurora, EC2, API Gateway,

PROFESSIONAL EXPERIENCE

SENIOR TECHNICAL PRODUCT MANAGER

Appstango • Lehi, Utah

JUNE 2022 — PRESENT

- Own long-term product outcomes across 26+ enterprise, banking, mobile, backend, AI platforms and systems, including roadmap direction, product performance, and post-launch iteration based on real-world usage (2022–present).
- Own product decisions impacting platforms serving 500,000+ daily users, driving prioritization tradeoffs, user experience, and system performance in production.
- Serve as Technical Product Owner for CAMS (ATM management platform), translating enterprise banking requirements into user stories and API contracts that enabled consistent, scalable feature delivery across releases.
- Drive roadmap execution across backend services, cloud workflows, and platform integrations, improving system scalability and reducing technical bottlenecks through informed architecture and data design decisions.
- Designed and implemented release governance workflows, including deployment validation and QA gating, reducing delivery delays by 20%.
- Led execution of 100+ product rollouts, improving release consistency and reducing production issues through structured validation and post-launch monitoring.
- Delivered features on weekly release cycles across mobile, backend, and AI systems, accelerating feedback loops and reducing time-to-iteration.
- Contributed across product, engineering, and system design, influencing API design, database structure, and AI workflow architecture to improve system performance and maintainability.
- Iterated on production systems based on real-world usage and stakeholder feedback, improving AI accuracy, workflow reliability, and overall system performance over time.

SELECTED PRODUCT LEADERSHIP: UTAH TECH LABS PARTNERSHIP (AI ESTIMATING PLATFORM)

- Led product strategy, requirements, and end-to-end delivery for Vega, an AI-powered estimating platform developed through a strategic partnership

Cognito, CloudFront), Azure Functions, Docker, GitHub Actions, GitLab CI/CD

Tools: Jira, Figma, n8n, Docker

Languages (working fluency): Python, SQL, JavaScript/TypeScript, Java

EDUCATION

MS: ENGINEERING AI AND MACHINE LEARNING •

Western Governors University

BS: COMPUTER SCIENCE-SOFTWARE ENGINEERING •

Western Governors University

AS: BIOLOGY •

Utah Valley University

CERTIFICATIONS

- CompTIA Project+
- ITIL Foundations - IT Service Management
- AWS Certified Cloud Practitioner
- PMP Certification (In-Progress)

with Utah Tech Labs, converting blueprint plans into structured material takeoffs across 35+ subcontractor categories.

- Identified and prioritized estimator pain points, defining MVP scope and phased roadmap to replace manual takeoff effort and improve workflow efficiency with AI-assisted systems.
- Designed AI-assisted workflows using OCR and document parsing, enabling automated conversion of unstructured blueprint data into structured outputs.
- Defined evaluation approach and success metrics, achieving 99% accuracy against a control group of 11 estimators and reducing turnaround time by 32x.
- Designed human-in-the-loop review workflows to balance AI automation with expert validation, improving trust, usability, and adoption.
- Enabled contractors to increase bid capacity by 200–300% by replacing manual estimation workflows with scalable AI-assisted systems.
- Iterated on system performance and accuracy based on real-world usage and edge cases, improving extraction reliability and output quality across varied blueprint formats.

DIGITAL TRANSFORMATION LEAD & QA ENGINEER

GENEVA ROCK PRODUCTS • UTAH

AUG 2011 — APR 2022

- Led testing, rollout, and adoption of enterprise quality control, field operations, and equipment tracking systems across multiple business units in a high-uptime, compliance-driven operating environment.
- Partnered with operations and field users to improve workflows and system usability, increasing efficiency and reducing friction in day-to-day operations.
- Drove digital transformation initiatives focused on process redesign, reporting automation, and operational visibility, reducing manual reporting time by 30%.
- Acted as a cross-functional bridge between business users and technical teams, improving system implementation outcomes and increasing adoption of new tools.
