SENIOR TECHNICAL PRODUCT MANAGER | AI | PLATFORM | ENTERPRISE SYSTEMS

Senior Technical Product Manager who builds AI platforms end-to-end. 10+ years spanning product management, solutions architecture, and digital transformation, with technical fluency across APIs, cloud infrastructure, and AI/ML systems, backed by an MS in AI & Machine Learning Engineering. Known for owning product decisions from concept through post-launch system evolution, with measurable outcomes including a 20% improvement in delivery predictability across multi-platform release governance.

CORE COMPETENCIES

Product Strategy & Roadmap Execution, Senior Technical Product Management, AI / ML Product Development, Platform & API Product Design, Requirements Definition & User Stories, Cross-Functional Leadership, Agile / Scrum Delivery, Stakeholder Management, Data-Driven Prioritization, Release Governance, Product Metrics & Observability, Enterprise & Fintech Product Delivery

TECHNICAL FLUENCY

AI/ML Systems: LLM orchestration, RAG pipelines, multi-agent systems, prompt engineering, context engineering, LLM evaluation, vector search, document parsing, OCR integration, AI workflow automation

Platforms / APIs: REST APIs, Swagger/OpenAPI, Postman, microservices architecture, event-driven systems

Cloud / Infrastructure: AWS (Lambda, S3, RDS/Aurora, EC2, API Gateway, Cognito, CloudFront), Azure Functions, Docker, GitHub Actions, GitLab CI/CD

Tools: Jira, Figma, n8n, Docker

Languages (working fluency): Python, SQL, JavaScript/TypeScript, Java

PROFESSIONAL EXPERIENCE

Senior Technical Product Manager

Appstango · Lehi, Utah · Jun 2022 – Present

Own long-term product outcomes across enterprise, banking, mobile, backend, and AI systems for multiple client engagements, including roadmap direction, product performance, and post-launch iteration based on real-world usage.

Own product decisions impacting platforms serving 500,000+ daily users, driving prioritization tradeoffs, user experience, and system performance in production.

Serve as Technical Product Owner for CAMS (ATM management platform), translating enterprise banking requirements into user stories and API contracts that enabled scalable feature delivery and supported onboarding readiness for Bank of America and Chase.

Designed and implemented release governance workflows, including deployment validation and QA gating, reducing delivery delays by 20%.

Delivered features on weekly release cycles across mobile, backend, and AI systems, accelerating feedback loops and reducing time-to-iteration.

Partnered with engineering on API design, database structure, and AI workflow architecture, influencing system performance and maintainability across the product portfolio.

SENIOR TECHNICAL PRODUCT MANAGER (VEGA AI ESTIMATING PLATFORM)

Utah Tech Labs · Lehi, Utah · Dec 2023 – Dec 2025

Led product strategy, requirements, and end-to-end delivery for Vega, an AI-powered estimating platform that converts blueprint plans into structured material takeoffs across 35+ subcontractor categories.

Identified and prioritized estimator pain points, defining MVP scope and a phased roadmap to replace manual takeoff effort with AI-assisted workflows.

Designed AI ingestion pipelines using OCR, document parsing, and LLM orchestration to automate conversion of unstructured blueprint data into structured outputs.

Defined the evaluation approach and success metrics, achieving 99% accuracy against a control group of 11 independent domain estimators and reducing turnaround time by 32x.

Designed human-in-the-loop review workflows that balanced AI automation with expert validation, with checkpoints retired progressively as model trust and accuracy improved.

Enabled contractors to increase bid capacity by 200-300% by replacing manual estimation workflows with scalable AI-assisted systems.

Iterated on system performance and accuracy based on real-world usage and edge cases, improving extraction reliability and output quality across varied blueprint formats.

ENTERPRISE SYSTEMS & DIGITAL TRANSFORMATION LEAD

Geneva Rock Products · Utah · Aug 2015 – Apr 2022

Led end-to-end digital transformation of enterprise operational systems supporting field operations, equipment tracking, and compliance workflows across multiple business units in a high-uptime industrial environment.

Partnered with operations leadership, field teams, and technical stakeholders to translate real-world workflows into structured system requirements, improving usability and operational efficiency at scale.

Drove redesign and automation of reporting and operational data flows, reducing manual reporting effort by 30% and improving decision visibility for leadership.

Acted as a cross-functional bridge between business operations and technical teams, defining requirements, validating system behavior, and improving release quality and adoption outcomes.

Supported rollout and adoption of enterprise systems in mission-critical environments requiring high reliability and minimal downtime.

EDUCATION

MS, Engineering AI and Machine Learning - Western Governors University, 2025

BS, Computer Science, Software Engineering - Western Governors University

AS, Biology - Utah Valley University

CERTIFICATIONS

AWS Certified Cloud Practitioner

CompTIA Project+

ITIL Foundations - IT Service Management

PMP Certification (In progress)
